Right click “Open in Terminal”

2. Set up and install

powershell

None

```
python -m venv .venv
.venv\Scripts\Activate.ps1
pip install -r requirements.txt
```

Your prompt should now start with (`.venv`). If activating gives a red "running scripts is disabled" error, run this once and retry the activate line:

powershell

None

```
Set-ExecutionPolicy -Scope CurrentUser RemoteSigned
```

3. Launch

powershell

None

```
python -m src.web.server
```

Then open <http://localhost:5000> in an incognito window (Ctrl+Shift+N) — Press Ctrl+C in PowerShell to stop.

4. In the browser

Open ⚙ Setup & keys, paste your Gemini API key → Save → ⚡ Test connection. Then fill in the builder (Model, Product, optional Logo, brief fields) and hit Run Campaign.

Enter the Gemini API Key
